PROFESSIONAL SUMMARY

AI Implementation Engineer and Backend Developer with a focus on Python, Django, and Workflow Automation. Specialist in mitigating LLM hallucinations through "Wait-and-Request" diagnostic protocols. Ranked in the Top 8,000 Prompt Engineers globally on PromptBase. Experienced in bridging hardware-level logic with scalable AI-integrated software solutions.

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, Django, Django Rest Framework (DRF), SQL, MySQL.
 - **AI & Automation:** Agentic Workflow Design, Prompt Engineering, Hallucination Mitigation, JSON Task Structuring.
 - **Tools & Deployment:** Git, GitHub, GitHub Actions, Postman, PythonAnywhere, RESTful APIs, Unit Testing.
 - **Core Concepts:** SDLC, OOP, SOLID Principles, Data Structures, Algorithms, Agile Methodologies.
-

PROFESSIONAL EXPERIENCE & PROJECTS

Commercial AI Logic Architect | PromptBase

March 2026 – Present

- Ranked #7,935 globally for technical prompt architecture and diagnostic tool development.
- Engineered a "Self-Correcting Diagnostic Suite" to automate the debugging process for backend developers.
- Developed a "Wait-and-Request" protocol (Agentic Workflow) that forces AI models to validate system context before code generation, reducing runtime errors.
- Utilized Multimodal Vision capabilities to automate the identification of UI crashes and map them to backend database repairs.

Backend Developer | P2P Exchange Platform

- Developed a full-stack marketplace using Python and Django, focusing on secure transaction logic.
- Architected MySQL database schemas and implemented token-based authentication for secure user access.
- Automated backend event handling using Django Signals and custom middleware.
- Leveraged AI-assisted rapid prototyping to accelerate frontend development while maintaining 100% backend data integrity.

Automated Data Collection & Weather API Tool

- Designed a Python-based data scraper and integration tool to fetch real-time environmental datasets via WeatherAPI.
- Automated the extraction, parsing, and console visualization of JSON-formatted external data.

E-Commerce API Project

- Built a production-ready E-commerce API specializing in backend server architecture and database management.
- Validated all endpoints using Postman to ensure robust token authentication and data security.

EDUCATION

Bachelor of Science: Communication and Electronics Engineering

Alexandria University | *October 2022 – Ongoing*

- **Award:** Best Hardware Design Award (LMR Competition) – Designed core autonomous logic for a Line-Follower robot from the hardware level.

CERTIFICATIONS & QUALIFICATIONS

ALX Alumine: Backend Web Development (Django-Rest Framework)

(Jan 2025 - Sep 2025)

- Mastered Python Fundamentals, OOP, and Database Management (SQL/MySQL).

AI Developer Professional Certificate (IBM)

Sep 2025 – Ongoing

- Completed 4/10 modules of a comprehensive 10-course series covering the full AI development lifecycle.
 - **Key Skills:** Generative AI Applications, Prompt Engineering, Python for Data Science, and AI-Assisted Front-End Development.
 - **Capstone Focus:** Building and deploying Generative AI-powered applications using Flask and Python.
-

LANGUAGES

- Arabic: Native (Speaking and writing).
- English: Fluent (Speaking and writing).
